

AN IMPROVED DATABASE SEARCHING DEVICE AND METHOD

ABSTRACT OF THE DISCLOSURE

A device and method for searching databases of cemetery records use a graphical user interface to display to a user a representation of the records arranged to reflect the relative location of graves to which the biographical information contained in the records pertains. The graphical user interface may display an alphabetical list of names of deceased individuals contained within the records as well as digital photos and digital video of headstones. Records may be accessed according to cemetery, in alphabetical order. Records may also be accessed by viewing a representation such as an image of a gravestone, and other records may be accessed according to the location of the graves.
